

```
administrator@tunnel-ssh:~$ /usr/sbin/tcpdump -i en0 -vvv -X tcp port 60001 -n  
tcpdump: listening on en0, link-type EN10MB (Ethernet), capture size 262144 bytes
```

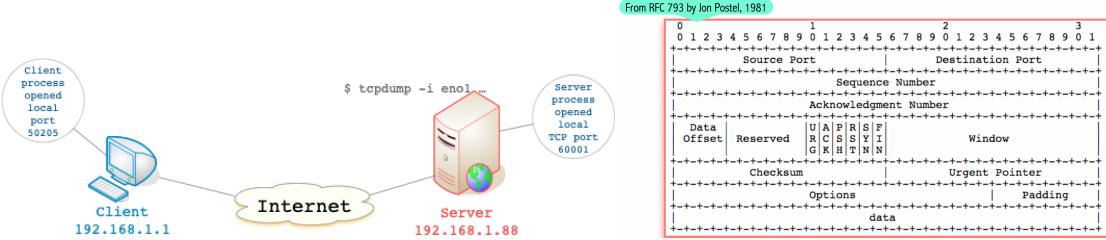

- Client sends a segment having the SYN flag set: The client requests a connection with the server
 - Observe "Flags [SEW]" in the following trace
 - Letter S means that the SYN flag is set. The other flags are not relevant to this introduction.
 - The initial sequence number (seq) announced by this client is 2088096106. This ISN, will be used by the client to number the byte stream (The ordered sequence of bytes) sent by the client
 - Later, when the server responds, it will send back an ack for 2088096107 which acknowledges the correct reception of this segment by the server
 - Observe that the ACK flag is not set: no field contains the string "ack"

```
14:26:31.847912 IP (tos 0x0, ttl 63, id 0, offset 0, flags [DF], proto TCP (6),

```

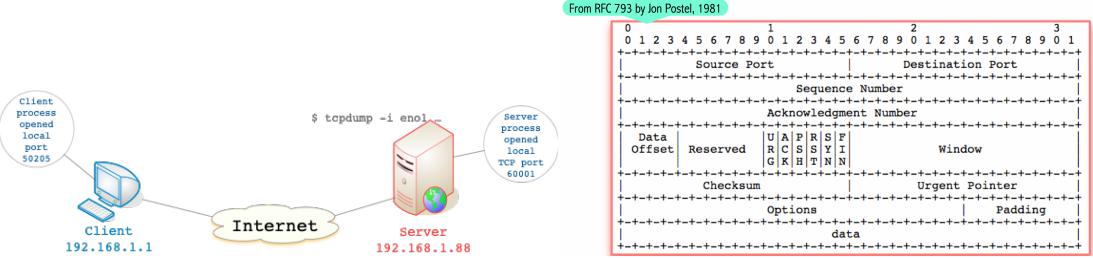

- *Server responds to the Client with a segment which in turn has the SYN flag set*
- *The ISN (Initial Sequence Number) for the Server-to-Client channel is 800462370. It is sent within this segment (See “seq ...”, below); when the client receives it, it will have to send back an ACK for 800462371*
- *This segment acknowledges data received from the Client up to and excluding byte 208809107 (See ack 208809107, below), i.e., the last byte correctly received was byte number 208809106. That byte number, in this case, was the initial sequence number sent by the client, so that, this segment means “I accept your connection request and do know that your ISN is 208809106.”*

```

```

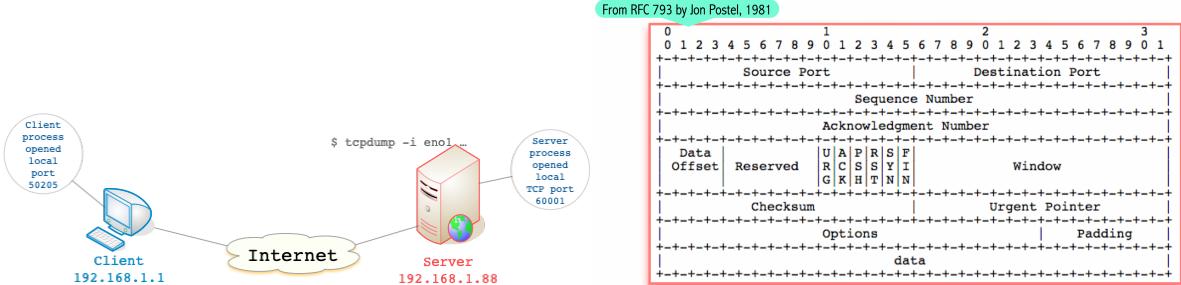

- With this segment, the client acknowledges the SYN just sent by the server
- Only the ack flag is set (See field ack below). The ACK SN is 1
 - Notice that this ACK SN 1 is a logical one, one that is easy to use by the tcpdump user. It acknowledges the SYN sent by the server which logical SN was 0.
 - ACK is set: observe ack 1, below:

```
14:26:31.850336 IP (tos 0x0, ttl 63, id 0, offset 0, flags [DF], proto TCP (6),
length 52)
  192.168.1.1.50205 > 192.168.1.88.60001: Flags [.], cksum 0x581c (correct), seq

  0x0030: 9cf4 6a8b 4865 6c6c 6f0a ..j.Hello.
```

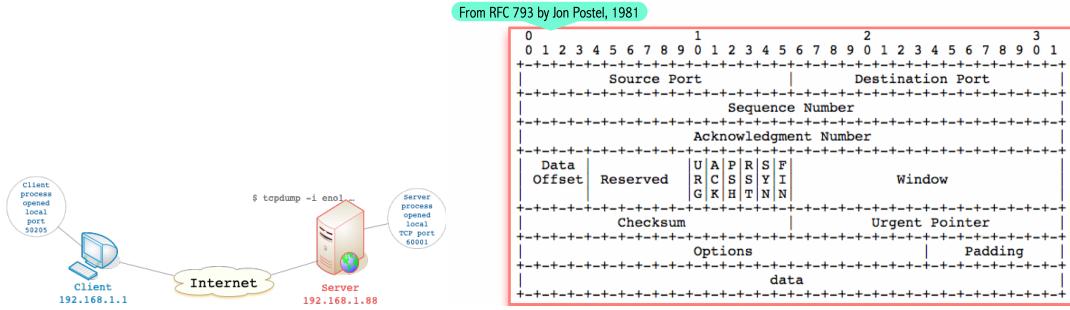

- Server responds by acknowledging the received data which was sent by the client
- See Ack 7 below. Ack 7 means that the sender of this segment acknowledges data bytes from logical sequence number 1 through Z (excluded), all in all, sequence numbers 1, 2, 3, 4, and 5.
- No data is sent by the server (Payload is empty) since length is 0 (See length 0 below)

```
14:26:36.406853 IP (tos 0x0, ttl 64, id 8400, offset 0, flags [DF], proto TCP (6),
length 52)
    192.168.1.88.60001 > 192.168.1.1.50205: Flags [.], cksum 0x83d0 (incorrect ->
